Erasmus Internship in Companies and new English Courses offer

Dear Partner,

Greetings from Spain!

My name is Julian Ramos and I am the Mobility Coordinator of the *ETSI Informatica (Computer Science School) at the University of Malaga (UMA)*.

From the Computer Science School at the UMA we want to offer your students the possibility of carrying out 230 hours of internships in companies of our city during their Erasmus mobility. This option will not be available at the time they made their pre-enrolment at our EMI Platform. However, once the student is accepted for his/her internship, it could be added to their learning agreements (LA), with 6 ECTS as the 'Practicas en Empresa' subject ('Internship in a Company'), if they have your approval, the origin university.

The minimum requirements are to have some knowledge of our Computer Science Degree subjects and demonstrate English language fluency. These requirements will be evaluated by the companies.

Once the students are in Malaga, they will be informed by email of our offer. Anyone who is interested in it should send me a motivation letter and his/her curriculum vitae. Later, when the companies have reviewed this documentation, we will contact the applicants to indicate if any company has shown interest in them and if so, give them the rest of the details. Therefore, applying for internships does not guarantee assignment.

Additionally, I invite you to review the Computer Science courses offer in English at our School. We are continuously adding new subjects. You can reach this information at this link:

https://www.uma.es/etsi-informatica/info/71514/asignaturas-en-ingles/?set_language=en

I hope these new possibilities for your students increase their interest in our Computer Science School.

Best regards,

Julián Ramos Cózar, mobility subdirector.
